

AgroCrypto Auditable Whitepaper

1. Introduction

AgroCrypto is a blockchain infrastructure designed for the settlement of global agricultural commodities. We operate under strict compliance, transparency, and auditability standards, offering secure, traceable, and technically validated tokenization of tangible assets.

2. Objective

To create a decentralized settlement protocol for:

- Commodities (soy, corn, coffee, etc.)
- Agricultural land
- Heavy machinery and equipment
- Carbon credits

All with a focus on institutional infrastructure, not speculative finance.

3. Blockchain Framework

- Ethereum (ERC-20): for institutional integration (Circle, USDC, compliance)
- Solana (SPL): for high performance, low cost, and scalability
- Tron: strategically used for liquidity in stablecoins (USDT), under control
- Custom Infrastructure (AgroCrypto Layer): optional, for direct settlement

4. Token Issuance

- Native token: AGRO (governance / utility / access)
- Asset-backed tokens: ACGA, FARM, CARB (linked to tokenized assets)

Example: 1 ACGA = 1 metric ton of ISO 14064 certified carbon credit

Total supply: defined by contract

Distribution:

- 50% Institutional liquidity reserve
- 25% Strategic offering (Trade Partners)
- 15% Development / Team / Infrastructure
- 10% Partnerships and User Incentives

5. Trading & Pairs

- Preferred pairs: USDC / AGRO, ACGA / USDC, FARM / ETH
- Planned bridge integrations: Wormhole, LayerZero, Circle CCTP
- No staking. No farming. Focus on real liquidity and utility

6. Compliance

- AgroCrypto Labs LLC is a registered entity
- Ubuntu Pro Landscape infrastructure audited (with Livepatch and applied hardening)
- Technical structure validated through tests (blockchain, APIs, DEX simulation)
- Methodology aligned with FATF, ISO 14064, and SWIFT Settlement Layer standards

7. Possible Listing Categories

- Asset-backed Token
- Commodities Infrastructure
- ESG Infrastructure
- Decentralized Settlement

8. Conclusion

AgroCrypto is not just another token: it is a new settlement layer for the global agribusiness. With real backing, audited infrastructure, and transparent operations, we are the technical answer to transforming real-world agricultural assets into globally recognized financial instruments.
